

Solution Requirements

Date	07 July 2026
Team ID	SWTID-2026-2168
Project Name	EduGenie: Google Gemini-Powered Learning Assistant
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	User authentication is not implemented in the current version. The application is accessible without login.	Low

2	Authorization levels	Single user access; no rolebased permissions are implemented.	Low
3	External interfaces	Integrates with Google Gemini API to generate AI-powered responses, summaries, quizzes, flashcards, roadmaps, and study plans.	High
4	Transactions processing	Processes user prompts, sends requests to the Gemini API, and returns AI-generated results instantly.	High
5	Reporting	Displays AI-generated summaries, quizzes, flashcards, and learning content to the user.	Medium
6	Business rules, etc.	User input is validated before processing, and responses are generated only from valid AI requests.	High
7	Compliance to laws or regulations	User queries are processed without storing personal information. Basic privacy practices are followed.	Medium
8	Other	Responsive web interface for desktop and mobile devices.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
------	--------------	-------------------------	-------------------------------------

1	Performance & Speed	The application should generate responses quickly.	Average response time < 3 seconds (network dependent)
2	Scalability	The backend should support future feature expansion and additional users.	Supports multiple concurrent users
3	Security & Data Privacy	API keys should remain secure and user data should not be permanently stored.	Secure API key handling
4	Reliability & Availability	The application should remain available whenever the Gemini API is reachable.	99% availability
5	Usability & Accessibility	The interface should be simple, responsive, and easy to navigate.	Responsive on desktop and mobile

6	Other	The code should be modular and easy to maintain.	Maintainable project structure
---	-------	--	--------------------------------
